SUMMARY

Data Analyst skilled in SQL, Python, Power BI, and Excel, focused on turning complex datasets into actionable insights. Experienced in exploratory data analysis, data cleaning, and dashboarding to surface trends and drive business decisions. I build clear, results-oriented visualizations and automated processes that improve decision-making and operational efficiency. Keywords: data analysis, data visualization, ETL, dashboarding.

EXPERIENCE

Data Analyst

Dec '25 — Present

Edverciity By LiveTechSkills

Nagpur, India

Working as a Data Analyst, responsible for collecting, analyzing, and interpreting data to support business decisions

- Identified inconsistencies and gaps in structured datasets that hindered reporting accuracy; performed exploratory data analysis and cleansing using Python (Pandas, NumPy) and SQL to prepare reliable inputs for models and dashboards.
- Built interactive Power BI dashboards and Excel reports to visualize key performance indicators and trends, enabling stakeholders to monitor outcomes and prioritize actions.
- Translated analysis into actionable recommendations that informed business decisions, using statistical methods and data modeling to support strategy and improve reporting clarity.

Graphic Designer

Aug '25 — Feb '26

Anicomie

Nagpur, India

Analyzed social media campaign metrics and sales pipeline data to optimize marketing performance, improve lead conversion, and support data-driven client outreach strategies.

- Reviewed campaign and sales data to identify underperforming creatives and opportunities for optimization; recommended design changes that supported improved targeting and messaging.
- Collaborated with marketing to align creative deliverables with data-driven insights, helping improve lead conversion and inform client outreach strategies.

SKILLS

Data & Analysis Python, SQL, Pandas, NumPy, Statistical Analysis, EDA, Data Cleaning, Predictive Modelling

Visualization & BI Power BI, DAX, Excel, Dashboard Design, Data Storytelling

Machine learning & AI Machine Learning, NLP, LangChain, LLM Integration, Generative AI

Tools & Dev Jupyter Notebook, REST API, Git/GitHub

PROJECTS

AQI Nexor [Link](#)

- Engineered end-to-end ETL pipeline processing 52,560+ hourly air quality records across 6 global cities with 99.9% data integrity (linear interpolation, Z-score normalization); modeled PM2.5, PM10, NO2, SO2 drivers to forecast hazardous AQI windows 24 hours ahead using Python (Pandas, NumPy).
- Built interactive Power BI dashboards (DAX, geospatial heatmaps, slicers) and integrated LangChain components for natural-language querying; optimized SQL queries with window functions for high-performance analytics.

Hospital Patient Readmission & Clinical Trend Analysis [Link](#)

- Designed a 5-table MySQL schema and authored advanced SQL (CTEs, window functions, RANK/LAG/LEAD, CASE) to analyze 30-day readmission, mortality, and ALOS across departments.
- Cleaned 10,000+ hospital records via SQL ETL achieving 98%+ data integrity and created Power BI dashboards (DAX) to surface clinical KPIs and identify high-risk patient segments by diagnosis and age group.

AI & Machine Learning Projects

- Built real-time language-detection model with Multinomial Naive Bayes and CountVectorizer (Scikit-Learn) to classify text across 17 languages, achieving 97%+ accuracy with validated vectorization and train-test workflow.
- Developed an AI-powered CSV Chat Agent using Python, LangChain, Groq API (LLaMA 3.3 70B) and Pandas to enable natural-language data queries via a lightweight HTML/CSS/JS interface.

AWARDS

Smart India Hackathon

Sep '25

Qualified at national level — Smart India Hackathon (SIH).

GEN-AI Google

Feb '26

Runner-up — GEN-AI Google for AQI Nexor project.

EDUCATION

Bachelor of Computer Applications, G H Rasoni Skill Tech University Nagpur (GPA: 8.22)
