

Tejasvi Parate

+91 82629 16531 — tejasvi.parate.official@gmail.com — [LinkedIn](#) — [GitHub](#)

Nagpur, Maharashtra

Profile

Data Engineer skilled in building scalable ETL/ELT pipelines, data processing systems, and analytics solutions using Python and SQL. Experienced with distributed data tools (Apache Spark, Kafka) and cloud platforms (AWS, GCP). Strong focus on data modeling, pipeline optimization, and transforming raw data into actionable insights.

Technical Skills

Programming: Python, SQL

Data Engineering: ETL/ELT Pipelines, Data Modeling (Star/Snowflake), Apache Spark, Kafka, BigQuery, Data Warehousing

Data Analysis & Visualization: Power BI (DAX, Power Query), Pandas, Matplotlib

Tools: Git, Docker, Airflow (Basics), Jupyter Notebook, VS Code

Cloud Platforms: AWS (S3, EC2), Google Cloud Platform (BigQuery)

Projects

End-to-End Data Pipeline for Football Analytics

2025

Python, Pandas, Apache Spark, BigQuery

- Built an end-to-end ETL pipeline to ingest, clean, and transform multi-league football data from web sources.
- Processed and standardized large datasets using Pandas and Spark, improving data consistency and reliability.
- Loaded structured data into BigQuery for analytical querying and reporting.
- Designed schema for efficient querying and optimized data retrieval performance.

AI-Powered CSV Data Query Engine [GitHub Link](#)

2026

Python, LangChain, Pandas, Matplotlib

- Developed a natural language interface to query structured datasets, reducing manual analysis effort by 40%.
- Implemented automated data preprocessing and transformation pipelines.
- Generated dynamic visualizations to support faster decision-making.

AI Chatbot with Contextual Memory [GitHub Link](#)

2026

Python, Streamlit, LangChain

- Built a context-aware chatbot with session memory for improved conversational accuracy.
- Integrated LLM APIs with optimized response handling and secure architecture.
- Enhanced response relevance by 30% through memory-based context retention.

Bank Transaction Management System

2026

SQL, MySQL

- Designed normalized relational database schema ensuring data integrity and consistency.
- Implemented stored procedures and triggers for automated transaction workflows.
- Performed analytical queries to extract business insights from transactional data.

Education

Dr. Babasaheb Ambedkar Technological University
B.Tech in Computer Science
Relevant Coursework: Data Structures, DBMS, Operating Systems, Computer Networks, Machine Learning

2023 – 2027

Certifications

- Data Science and Analysis – LinkedIn Learning
- Data Analytics Job Simulation – Deloitte
- Certified Artificial Intelligence Security and Risk (CAISR)

Languages

English (Fluent), Hindi (Fluent)
