Data Analytics

+918668717531 ◇ ashishpatelg2@gmail.com ◇ Nagpur, Maharashtra, India ◇ [LinkedIn](#)

SUMMARY

Results-driven Data Analyst skilled in SQL (JOINS, CTEs, Window Functions, Subqueries), Python, Power BI, and Microsoft Excel, with hands-on experience querying 50,000+ records, designing relational databases, and delivering actionable business insights through advanced SQL analytics and data visualization. Proven ability to write optimized SQL queries, identify trends, and translate complex datasets into strategic decisions. Adept at KPI tracking, exploratory data analysis (EDA), ETL pipeline development, and cross-functional collaboration using MySQL and PostgreSQL. Seeking to leverage SQL and Business Intelligence expertise in a Data Analyst role to drive measurable organizational impact.

EXPERIENCE

Data Analyst

Dec '25 — Present

Edverciity By LiveTechSkills

Nagpur, India

Working as a Data Analyst, responsible for collecting, analyzing, and interpreting data to support business decisions

- Challenge: Ingested and prepared disparate operational data for analysis; Action: Built and automated end-to-end ETL pipelines in Python (pandas, NumPy) to process 50,000+ records and integrate multiple sources; Result: Eliminated manual ETL steps and produced reliable, analysis-ready datasets for stakeholders.
- Challenge: Stakeholders required reliable forecasts and performance visibility; Action: Performed exploratory and predictive analysis using SQL and Python and deployed interactive Power BI dashboards to surface key metrics; Result: Enabled data-driven product and marketing decisions through timely forecasts and KPI monitoring.

Graphic Designer

Aug '25 — Feb '26

Anicomic

Nagpur, India

Analyzed social media campaign metrics and sales pipeline data to optimize marketing performance, improve lead conversion, and support data-driven client outreach strategies.

- Challenge: Campaigns lacked data-driven content decisions; Action: Analyzed social media and campaign metrics using Python and SQL to identify top-performing content and optimize posting strategy; Result: Improved audience engagement through targeted content selection.

SKILLS

Technical Skills: SQL, Advanced SQL (JOINS, CTEs, Subqueries, Window Functions, CASE WHEN), MySQL, PostgreSQL, Python, Pandas, NumPy, SciPy, Power BI, DAX, Microsoft Excel (VLOOKUP, Pivot Tables), Data Visualization, ETL Pipelines, Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Predictive Modeling, KPI Tracking, Jupyter Notebook

Other Graphic Design, Lead Generation, Social Media Analytics

PROJECTS

Hospital Patient Readmission & Clinical Trend Analysis

- Designed a relational database schema (5+ tables) in MySQL, writing advanced SQL queries using CTEs, Window Functions (RANK, LAG, LEAD), CASE WHEN, and JOINS to analyze 30-day patient readmission rates, mortality rate, and average length of stay (ALOS) across departments
- Cleaned 10,000+ hospital records via Python (Pandas) and SQL ETL pipelines achieving 98%+ data integrity, and built Power BI dashboards with DAX to track clinical KPIs and identify high-risk patient segments by diagnosis codes and age groups

HR Analytics & Employee Attrition Analysis

- Designed an HR relational database (employees, departments, salaries, performance, attrition) in MySQL and wrote advanced SQL queries using CTEs, Window Functions (RANK, DENSE_RANK, LAG, LEAD), and JOINS to analyze attrition rates by department, salary band analysis, and headcount trends
- Performed cohort analysis and employee progression tracking using CASE WHEN and subqueries, exporting insights to Power BI dashboards with DAX and Excel Pivot Tables to visualize KPIs including attrition rate, salary distribution, and workforce performance metrics

AWARDS

Smart India Hackathon

Sep '25

Qualified at national level — competitive data solutions (shows data problem-solving aptitude)

GEN-AI

Feb '26

Runner-up, Google GEN-AI — forecasting & visualization (applied ML and Python)
