PROFESSIONAL SUMMARY

I am an aspiring data analyst with strong knowledge of SQL, including JOINS, aggregations, and window functions. I have worked on analyzing datasets, extracting insights, and building dashboards using Power BI. I am eager to apply my skills to real-world data problems.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering

Swaminarayan Siddhantha Institute of Technology, Nagpur

2023 – 2027

SQL PROJECTS

CSV Data Analysis Agent using LangChain

- Developed an intelligent CSV data analysis agent using Python, LangChain, and Groq LLM.
- Implemented `create_csv_agent` to enable natural language interaction with CSV datasets.
- Integrated Pandas for data processing and automated query execution on structured data.
- Built functionality to answer user queries such as data summaries, filtering, and insights generation.
- Secured API access using environment variables and handled dynamic user inputs.
- Designed a user-friendly workflow for analyzing datasets without writing SQL queries manually.

HR Analytics using SQL

- Designed and implemented an HR analytics database using SQL Server to manage employee records, salary, attendance, and performance data.
- Cleaned and transformed raw HR datasets into structured relational tables ensuring data integrity and consistency.
- Performed advanced SQL analysis using JOINS, subqueries, CTEs, and window functions (RANK, DENSE_RANK).
- Analyzed employee attrition trends based on factors such as salary, department, job role, and experience.
- Generated insights on employee retention, workforce performance, and salary distribution.
- Built SQL-based reports to track KPIs like attrition rate, average salary, and department-wise performance.
- Optimized query performance using indexing techniques, improving execution time by up to 20%.

Customer Sales Analysis using SQL

- Designed normalized relational database schema for customer and sales data.
- Wrote complex SQL queries using JOINS, GROUP BY, HAVING, and subqueries.
- Analyzed customer purchasing behavior and identified top-performing products.
- Improved query performance using indexing and query optimization techniques.

Inventory Management Database System

- Built end-to-end database system to manage products, suppliers, and stock levels.
- Created stored procedures, views, and triggers for automation.
- Ensured data integrity using constraints (PRIMARY KEY, FOREIGN KEY, NOT NULL).

TECHNICAL SKILLS

SQL Skills: Joins, Subqueries, Window Functions, CTEs, Indexing, Query Optimization, Stored Procedures, Views, Triggers

Databases: MS SQL Server, MySQL, Oracle

Data Analysis: SQL Analytics, Aggregations, Data Cleaning

Visualization: Power BI

Programming: Python (Basics for Data Handling)

Tools: SSMS, Git, GitHub, Jupyter Notebook

KEY ACHIEVEMENTS

- Optimized SQL queries improving execution time by up to 25%.
- Developed reusable SQL scripts for reporting and analytics.
- Successfully handled datasets with 10K+ records for analysis.

LEADERSHIP & RESPONSIBILITIES

- Mentored peers in SQL concepts including joins, normalization, and query writing.
- Led database design and query development in academic projects.
- Collaborated with team members to build efficient data solutions.
